

Zurich Flood Resilience Alliance:

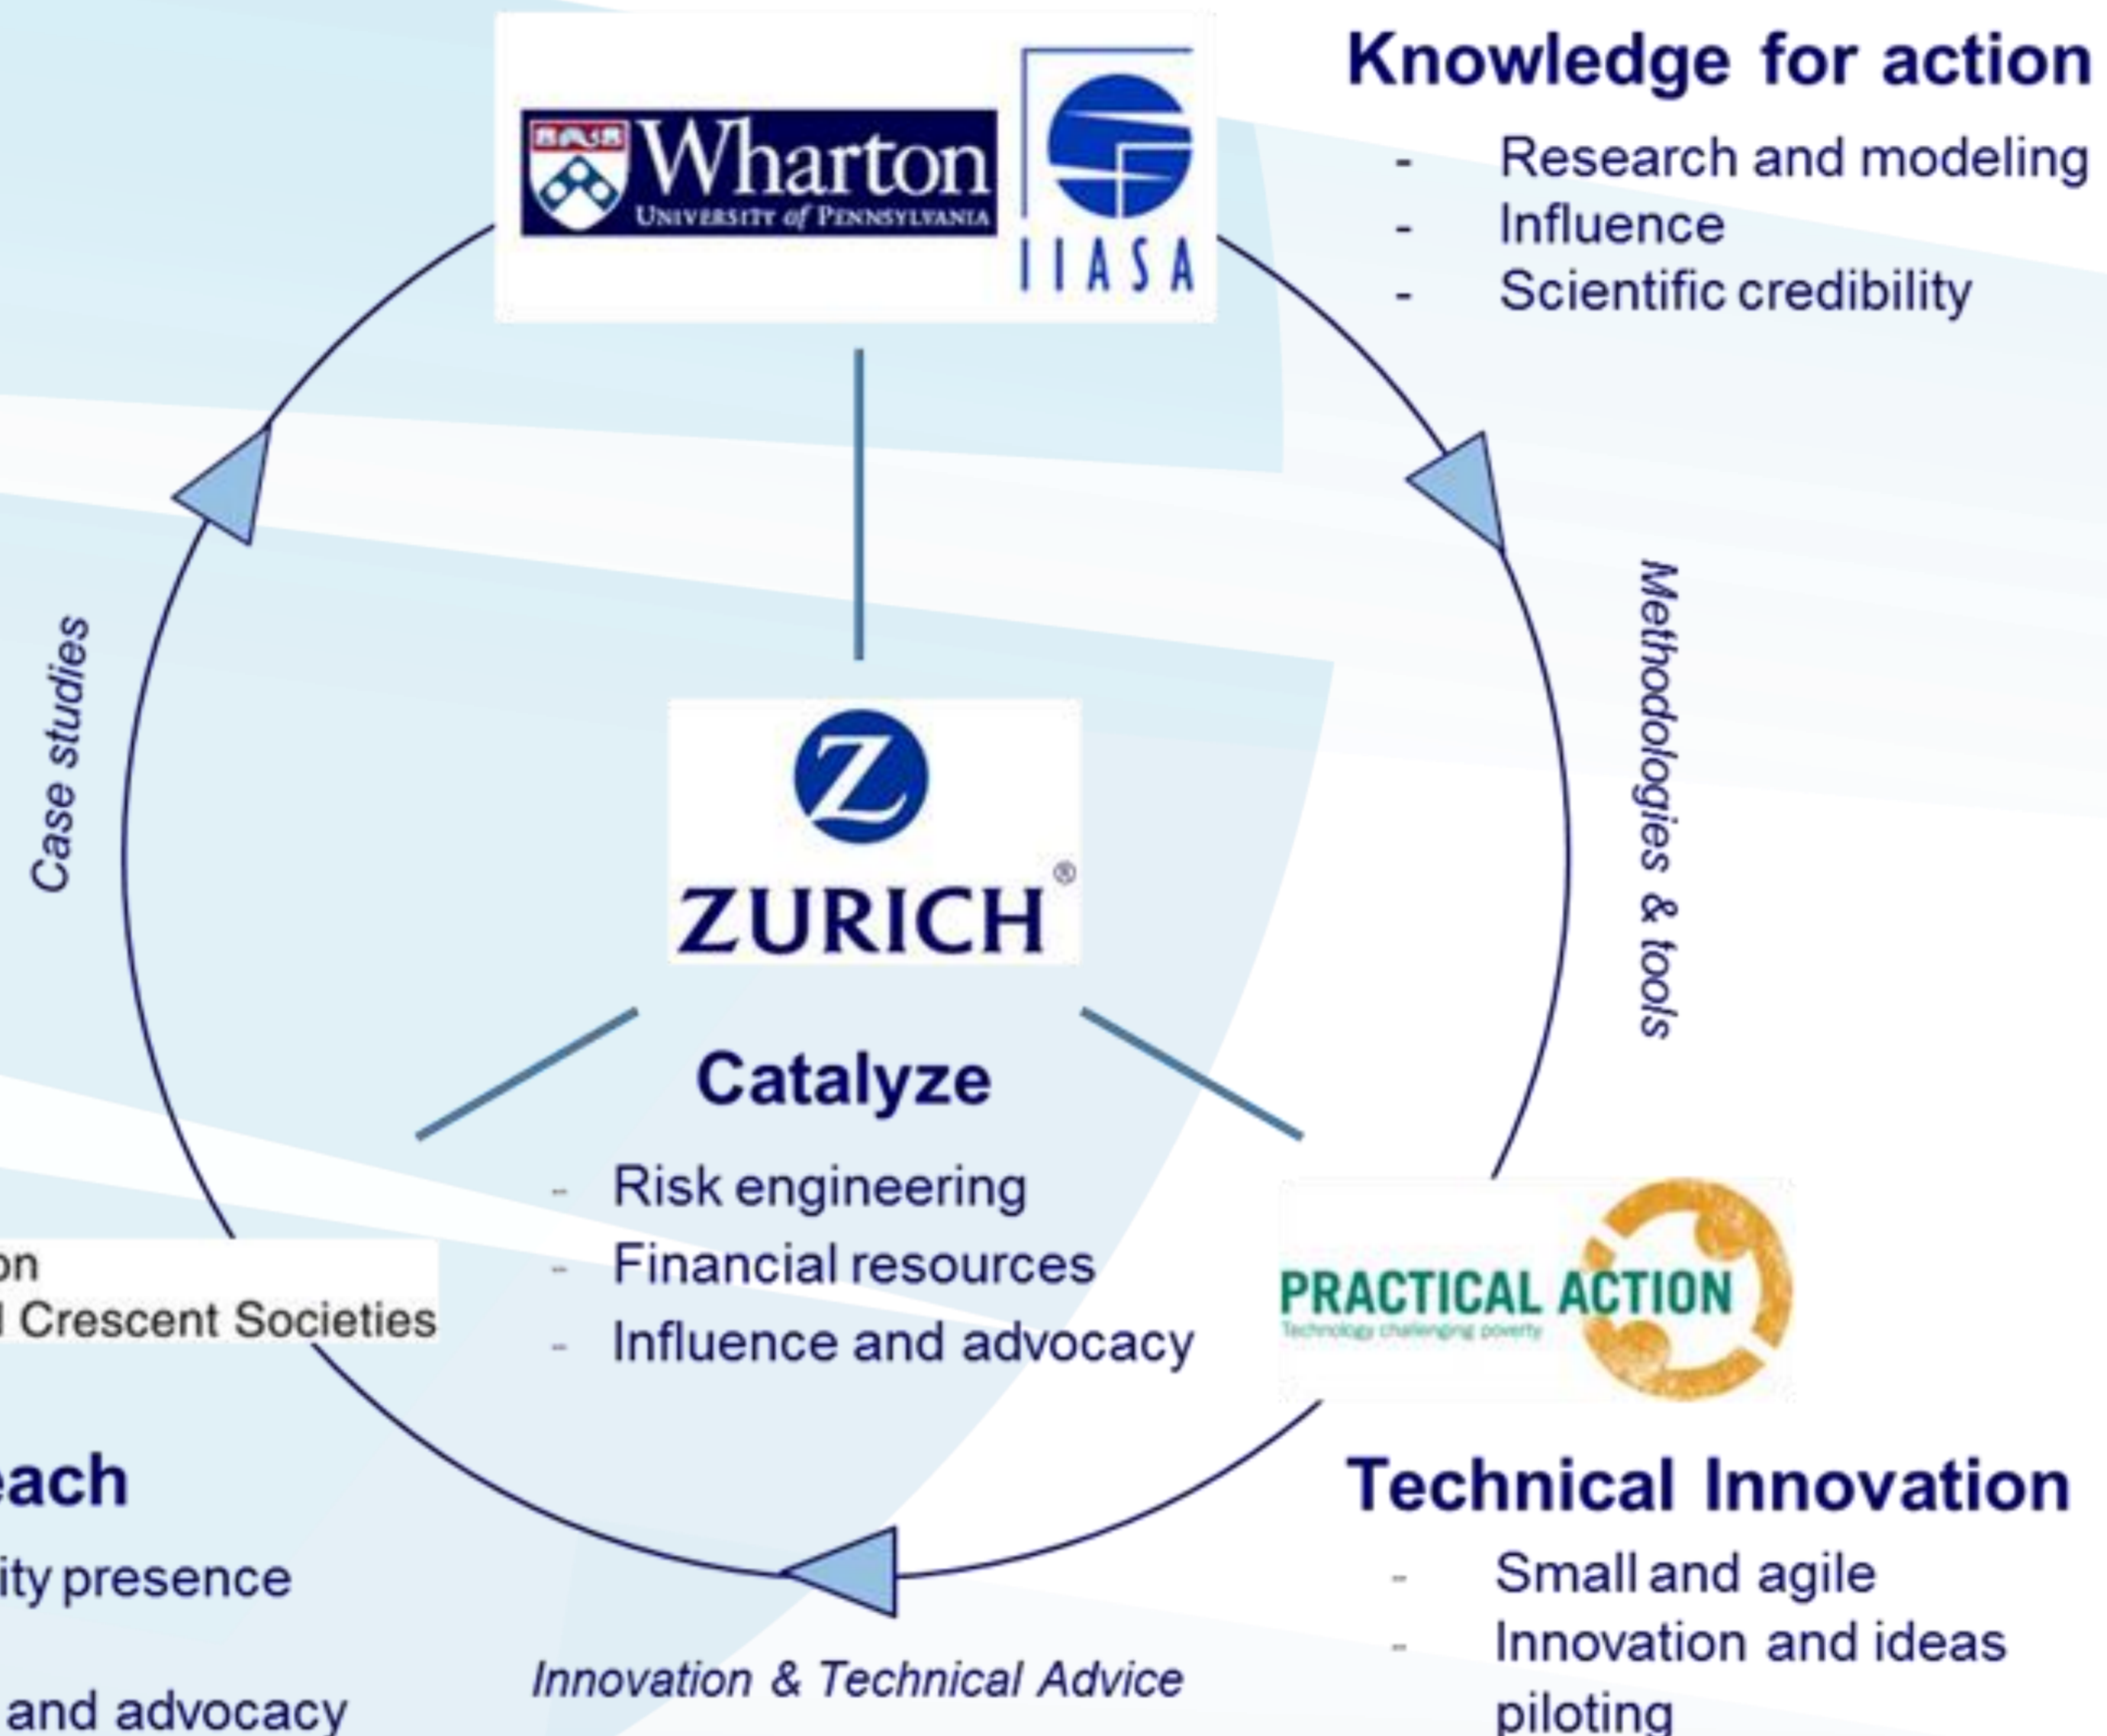

A unique collaboration between the private sector, NGOs and academia, working to demonstrate the benefits of pre-event investment to treat the cause of flooding, as opposed to just post-event relief of symptoms.

Flood Resilience Game! Players experience the complex nature of flood resilience, building their understanding and improving decision making.

Collaborating with Practical Action **Peru** to address the underlying drivers of flood risk in Peru's Rimac River watershed.

Measuring flood resilience: IIASA RISK scientists are working with the Alliance and four additional NGOs to test the Zurich Flood Resilience Measurement Framework and Tool in **70 communities across eight countries worldwide.**

This project is generating empirical evidence on the sources of resilience – something which has never been done before.

Mapping flood resilience in rural **Nepal** by linking with NGO processes and generating freely available, digital information.
